

# VIVID-VR Task

Vivid is a visually stunning design that combines simplicity with sound ergonomic principles. The German BOCK Synchronous mechanism provides continuous synchro movement and anatomical support for an exceptional sitting experience. The Vivid VR is also fitted with a forward tilting function to provide pelvic support whilst sitting in a 'Perch-position'. Adjustable 3D armrests and lumbar support are integrated into the back frame and move with the user. The guiding principles of flexibility, comfort and user-friendly adjustability are clearly evident across the Vivid Task Range.
